A little sketch & prototype for future tasks

ACMG

There is a possibility to multiselect an InhetitanceMode(-s) during record creation

And filter by it

Identity

During the registration we have removed the UserName field

The user is registered and the application is immediately accessible by him

The user receives an email

When he follows the link he is automatically logged into the web application and his email registration status is shown

When user wants to restore the access, he enters the correct email at the login page

And clicks a link to restore password

He receives a letter

When he follows the link like http://genelook.com/restore-password?token=CfDJ8K4irh...

User enters a new password

And he is automatically logged to the application

Report sharing history

And in reports section
